

ECD/ECI-15 to ECD/ECI-120

Conventional Roller Beds

ECD-15 to ECD-120 (Drive) and ECI-15 to ECI-120 (Idler) are standard conventional roller beds.

They have a smart and robust design made of high-quality key components including high-load polyurethane rollers as well as direct drive and a flexible integration.

- Interface connection to ESAB CaB equipped with weld controller PEK for complete integration
- Two wireless remote-control pendants using Radio Frequency (RF), and an inductive charger comes as standard
- Control panel with PLC and solid-state inverter for precise speed control
- Wheel holder C - C adjustable in steps to cover various work piece diameters
- High quality gear motors from a European supplier with a minimum of backlash
- Optional Motorised/Idler Rail Bogie versions
